
EEP71

Release 0.5

Dani Moeliker & Damian Verbeek

Oct 28, 2019

CONTENTS:

1	EEP71: GUI	3
1.1	Dependencies & How to Install Them	3
1.2	How to Run the Project	3
2	EEP71: GUI Code (Autogenerated)	5
3	Indices and tables	7
	Python Module Index	9
	Index	11

EEP71 project for the Raspberry Pi GUI.

Dependencies —

opencv-python (cv2) PyQt5 (REQUIRES INSTALLATION OF QT FRAMEWORK AS WELL (SEE README))

1.1 Dependencies & How to Install Them

This readme section is written with primarily Linux in mind.

1. `python-opencv` Run `pip install opencv-python`. Works the same way for Windows users. If pip ran without error then you have successfully installed this dependency.

2. `PyQt5` Run `pip install PyQt5` to install the PyQt5 library. This still requires you to install Qt5.

For Arch users run `sudo pacman -S qt5-base`.

For Ubuntu users see https://wiki.qt.io/Install_Qt_5_on_Ubuntu.

For Windows users see <https://www.qt.io/download-open-source#section-2>.

1.2 How to Run the Project

Assuming all dependencies were installed correctly all you have to do is run `python mainwindow.py` in your terminal emulator.

EEP71: GUI CODE (AUTOGENERATED)

```
class mainwindow.UI_Window
```

```
    nextFrameSlot ()
```

Reads the next frame from the OpenCV camera object and outputs it to a QPixmap.

```
    openCamera ()
```

Opens the camera using OpenCV. This method works when only one camera is connected and will default to the first camera it can find.

```
    stopCamera ()
```

Stops the camera.

INDICES AND TABLES

- `genindex`
- `modindex`
- `search`

PYTHON MODULE INDEX

m

mainwindow, 5

INDEX

M

`mainwindow` (*module*), 5

N

`nextFrameSlot()` (*mainwindow.UI_Window method*), 5

O

`openCamera()` (*mainwindow.UI_Window method*), 5

S

`stopCamera()` (*mainwindow.UI_Window method*), 5

U

`UI_Window` (*class in mainwindow*), 5
